

CLAIM AMENDMENTS:

1-15 cancelled

16. (new) A suction body component for long-term storage of body liquids in absorbing, skin-friendly, single-use products, the suction body component comprising:

a carrier material; and
a particulate, super-absorbing polymer material, said super-absorbing polymer material having a core with an outer surface, wherein at least part of said outer surface comprises a coating agent for reducing an absorption rate of said core, said coating agent comprising a first skin care product.

17. (new) The suction body component of claim 16, wherein said core comprises a second or said first skin care product.

18. (new) The suction body component of claim 17, wherein said core comprises at least 50% or at least 65 % of said second or said first skin care product in said super-absorbing polymer material.

19. (new) The suction body component of claim 16, wherein said first skin care product is water-soluble.

20. (new) The suction body component of claim 16, wherein said first skin care product comprises a vitamin.

21. (new) The suction body component of claim 16, wherein said first skin care product comprises a plant component, a plant extract, plant oil, or plant distillate.

22. (new) The suction body component of claim 16, wherein said first skin care product comprises an organic acid.
23. (new) The suction body component of claim 16, wherein said first skin care product comprises an amino acid.
24. (new) The suction body component of claim 16, wherein said carrier material comprises cellulose fibers, synthetic fibers, a foamed material, a porous matrix, and/or a thermoplastic synthetic matrix.
25. (new) The suction body component of claim 16, wherein said carrier material forms a matrix and said particulate super-absorbing polymer material is homogeneously bound in said carrier material or in sections thereof.
26. (new) The suction body component of claim 16, wherein said super-absorbing polymer material is disposed over a large surface area of said carrier material to form a layer.
27. (new) An absorbing single-use product comprising the suction body component of claim 16, wherein the product comprises a top sheet facing a users body and a back sheet facing away from the user's body, said top and said back sheets surrounding and sandwiching the suction body component.
28. (new) An absorbing single-use product comprising the suction body component of claim 16, wherein at least one further liquid-permeable layer is disposed above the suction body component at a user's body side.

29. (new) Use of the suction body component of claim 16, for disposing skin care products onto human skin.
30. (new) Use of the suction body component of claim 16, for producing a product to improve health of human skin.
